Sirs:

As an active Radio Amateur I am concerned that the proposed Broadband Over Power Line (BPL) system will cause irreparable interference to services licensed to operate in the 2 MHz-80 MHz frequency range. I have been a licensed Radio Amateur for over 34 years and a graduate electrical engineer for over 20 years, and the technical information collected from in-field observations of BPL by the American Radio Relay League (ARRL) is disturbing and well portrays the effects of BPL from radiated emissions. I urge the Commission to not approve the use of BPL until testing can demonstrate the lack of negative impact on existing users. Such an approach is prudent, and consistent with good engineering practice.
